Investigation Summary

AI-selected priorities are explicitly labeled and cannot introduce new financial facts. Other explanations are deterministic summaries of verified results.

Calculated summary: 1 verified review findings; 0 source rows excluded from financial calculations. Flags require investigation, not automatic payment decisions.

Calculated summary: The expense-minus-budget variance is calculated from represented monthly allocations. Review the unfavorable cost centers listed in Financial Performance; the dataset alone does not establish causal explanations.

Calculated summary: Largest recorded department expense: Finance, EUR 3,191.86. This is a spending concentration, not evidence of its underlying cause.

Calculated summary: Largest unfavorable cost-center variance: CC-FIN, EUR 191.86 above its represented allocation. Review invoice scope, approvals and allocation ownership before attributing a cause.

Calculated summary: Deterministic summary: prioritize high-severity findings, missing approvals, budget conflicts and supporting invoice checks. No live AI explanation was used.

Methodology and Limitations

• Trimmed surrounding whitespace in analytical fields; source retained unchanged.

• Normalized currency to uppercase; only EUR is supported; no FX conversion.

• Parsed ISO dates (including Excel midnight cells) and exact nonnegative cents; invalid financial rows excluded explicitly.

• Retained duplicate records for audit; no automatic deduplication.

• Budget allocation grain: month, department, cost_center; conflicts reported, not summed.

• Explicit natural-language request scope applied; source-row references preserved.

• Duplicates: invoice/vendor/exact cents/date; possible matches within three days.

• Outliers: category Q3 + 1.5 × IQR, minimum eight eligible observations; not fraud proof.

• Variance = actual − budget; positive is unfavorable. Percent undefined for zero/unknown budget.

• Budgets are counted once per month/department/cost center; unknown/conflicting groups withhold overall variance. All payment statuses and potential duplicates remain in actuals.

• Policy PDFs: PyMuPDF extraction; same-page/section chunks, lexical retrieval, exact quotes and retained-byte hashes. Title/version/effective date are uploader-declared.

• Only exact supported category-limit sentences are automatically evaluated; other policy language and exceptions require human review.

• Review flags are not findings of fraud.

• Totals retain possible duplicate entries until human review.

• Budgets cover represented month/department/cost-center allocations only.

• EUR-only, nonnegative expenses; refunds and FX conversion are not supported.

• This report supports human review and is not a certified financial audit.

• Financial amounts attached to findings are affected recorded expenses, not proven losses; overlapping findings must not be summed.

• Undated records cannot be assigned to a narrower reporting period.

• Policy checks are limited to supported retrieved rules; they are not an exhaustive compliance assessment.
