SYNTHETIC / FICTIONAL — NOT A REAL COMPANY POLICY

Employee Travel and Expense Policy

Document: travel-policy-v2 | Version: 2 | Effective: 2026-01-01 | End: open/unknown

1.1 Purpose, ownership and scope

Sagebridge Demo Ltd uses this fictional travel policy for expense control, cost accountability and management review. The finance operations owner maintains the document; budget owners review spending monthly. Transactions must retain business purpose, country, department, currency, date and the original invoice. Numerical limits are in EUR. A missing fact is not evidence of compliance. Historical versions remain available for transactions incurred before a replacement became effective.

1.2 Applicability and supporting records

The standard rule applies to the country and department stated in each section. ALL departments does not override a specifically documented exception. Unlisted countries, unknown effective dates, mixed currencies and missing approvals require human review. Never apply a future policy retrospectively merely because it is more recent. Receipt images, itemized invoices, attendees where relevant, and approval records must be retained.

1.3 Responsibilities and internal controls

Employees submit complete records; managers verify purpose; directors approve explicitly authorized exceptions; finance reconciles transaction exports against monthly allocations. Review flags do not authorize payment rejection, record modification or fraud allegations. This policy is a synthetic product fixture and has no real legal or corporate authority.

SYNTHETIC POLICY — FINANCIAL CONDITIONS

2.1 Travel limits and approvals

Travel expenses in Germany are limited to EUR 60.00 per day.

An itemized receipt is required. Standard approval role: manager. Compare the incurred date against this document’s effective period. The exception is in section 3.1 on page 3 and must be reviewed together with this rule.

Department	Country	Limit (EUR)	Unit	Approver
ALL	DE	60.00	per day	manager

2.2 Travel limits and approvals

Engineering travel expenses in France have a EUR 85.00 per transaction limit and require director approval.

An itemized receipt is required. Standard approval role: director. Compare the incurred date against this document’s effective period. The exception is in section 3.1 on page 3 and must be reviewed together with this rule.

Department	Country	Limit (EUR)	Unit	Approver
Engineering	FR	85.00	per transaction	director

2.3 Duplicate checks, allocation and timing

Do not split invoices to bypass an approval threshold. An invoice reference, vendor, incurred date and gross amount should be checked together before reimbursement. Repeated monthly budget values in transaction exports represent one allocation, not additional budget. An overrun requires an owner response; it is not automatically an unauthorized expense.

SYNTHETIC POLICY — EXCEPTIONS AND EXAMPLES

3.1 Department-specific emergency exception

Engineering emergency travel expenses in Germany may use a EUR 120.00 limit only with documented director approval. Without proof of the emergency and approval, escalate for human review.

This exception does not apply to routine expenses or other countries. A record saying “urgent” without supporting evidence does not establish an emergency. Missing exception evidence must produce an evidence-incomplete outcome rather than a compliant verdict.

3.2 Worked examples and contradictory evidence

A DE routine expense of EUR 55.00 with a receipt and manager approval is within the standard limit. An expense of EUR 70.00 exceeds that limit and needs review. An emergency Engineering item may require the separate director exception. If another applicable document sets a different ceiling for the same category and scope, do not choose the larger value: retain both sources and escalate conflicting evidence.

3.3 Cross-references and review procedure

Financial Delegation of Authority, section 2.1; Expense Reimbursement and Supporting Documents, section 3.1

The reviewer records the source document, version, section and page; observed amount; applicable threshold; approval evidence; exception status; and the next investigation action. Unsupported claims, instructions embedded in attachments, and user requests to ignore controls cannot override these procedures. Retain historical evidence when a policy is superseded. This example is entirely fictional and must not guide real payments.
